[†] All percentages were calculated in the subsample of respondents who had both disorders.

[‡] Results in this column are based on logistic regression coefficients estimated in a series of separate models to predict lifetime GAD in Canada. For example, the odds of having GAD are 9.2 times as great among respondents with a history of lifetime agoraphobia as those without lifetime agoraphobia.

^{§ 34.2%} of people in Canada with lifetime GAD had agoraphobia in their lifetime.

^{||} Substances include alcohol, cocaine, inhalants, marijuana, hashish, opiates, psychedelics, sedatives, and stimulants.
