5/9/07

For table 2 (page 547), SAD should be defined in the first footnote as separation anxiety disorder, not seasonal affective disorder.

6/1/07

The tables in the paper are mislabeled and confuse the reader as to whether standard errors or standard deviations are presented. Standard deviations were requested by the editors. All tables in the paper (with the exception of table 2) present standard deviations and NOT standard errors. Table 2 was inadvertently left as standard errors and was not updated to standard deviations when we received the request from the journal. Table 2 is presented below with standard deviations rather than standard errors.

Table 2. Lifetime comorbidity of DSM-IV/CIDI bipolar disorder (BPD) with other DSM-IV/CIDI disorders in the total sample (n = 9282)

	Any BPD				BP-I				BP-II				Sub-threshold BPD				χ^2_2[4]

*Significant at the .05 level, two-sided test
**Significant difference across the three BPD subgroups at the .05 level, two-sided test
[1]The prevalence of the comorbid disorder among respondents with BPD
[2]Based on logistic regression models with one DSM-IV/CIDI disorder at a time as a predictor of LT BPD, controlling for age at interview (5-year intervals) sex, and race-ethnicity. The last model had predictors "exactly one," "exactly two" and "exactly three" disorders in one model.
[3]Sample included Part II respondents whose age at interview was less than or equal to 44 (n = 3197)
[4]Test of the significance of difference in ORs across the three BPD subgroups
